

COLLABORATE APPROVAL

2016-06-17 - Shaun Gray - KNOWLEDGEWELL

Wellcom London are pleased to announce the release of 'Collaborate' to our valued customers.

Approving content made simple. View, comment and compare with ease using Knowledgewell's Online Approval application, that promotes collaboration, accountability and unambiguous commentary from your team. Get faster sign-offs and clearer feedback with easy-to-use, visual web application for viewing and annotating imagery, video and print content from any web browser or mobile tablet.

Collect and consolidate feedback from reviewers independently or save time by holding live online meetings to present and review content together in real-time. Iterate faster with collaborative threads that consolidate all feedback in context, reducing the need for multiple rounds of email and the potential for misunderstanding. Track the progress of your projects - from initial concept through to final design - and use the side-by-side comparison mode to view and confirm changes between any two versions.

Easily share approvals folders with team members and clients while controlling who sees what and when. Decide what level of security is required and invite external "guests" with or without requiring a password.
